Sub :- Performance report of OMEGA – 57 Grease

Having closely monitoring the applications and performance of OMEGA – 57 grease, I wish to share the encouraging result of the same.

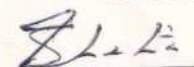

MACHINE	COMPONENT	COST OF BEARINGS
Pennwalt make Centrifuge (Super-D-Canter)	Bowl and Conveyor Bearings (1 set = 4 nos.)	Rs.10,000/-

Before using OMEGA – 57, the re-greasing interval was once in fifteen days and average bearing life achieved was three to four months.

In the same bearings, after introducing OMEGA – 57 grease, re-greasing interval has increased from earlier fifteen days to once in a month, and average bearing life has enhanced from earlier three to four months to seven to eight months at present. Encouraged with the performance of OMEGA – 57 grease, we have used the same in Combustion Air Blower and Hypo Blowers. Here too performance is found to be satisfactory.

These observations record a distinctly superior performance of OMEGA lubricants and I take pleasure in advocating its use for all maintenance purposes.

With Best Wishes,

R. BHATIA
GROUP MANAGER
